

GEOVANY GONZALEZ

Full Stack Software Engineer

Mérida, Yucatán | +52 999 232 5354 | geovanygonzalezdev@gmail.com | GitHub: GGDev404

PROFESSIONAL SUMMARY

Full Stack Software Engineer with a track record of building scalable, high-performance web applications end-to-end — from responsive frontends with React/Next.js to robust backend systems with NestJS. Proven ability to design real-time IoT data pipelines, optimize system performance under high concurrency, and deliver secure, production-ready solutions. Strong foundation in cloud infrastructure (AWS), asynchronous processing (Redis, BullMQ), and modern database architecture (PostgreSQL).

PROFESSIONAL EXPERIENCE

Kwan Tecnología | Full Stack Developer

January 2025 – July 2026

- Built responsive, server-side rendered (SSR) web interfaces using Next.js and MUI, delivering fast, production-grade user experiences.
- Architected an asynchronous messaging system with BullMQ and Redis to handle heavy background processing, increasing system availability by 40%.
- Designed and deployed an IoT gateway using MQTT for real-time, bidirectional communication between connected devices and backend services.
- Automated recurring operational tasks through scheduled cron jobs, improving system reliability and reducing manual intervention.
- Built a high-performance mobile application with React Native, integrating scalable push notification systems used across the user base.
- Implemented secure authentication and role-based access control (RBAC) using AWS Cognito, safeguarding user identity across the platform.
- Reduced primary database load through strategic Redis caching, significantly improving API response times.
- Engineered cursor-based pagination and advanced filtering to maintain fast query performance on large-scale datasets.
- Designed a secure, JWT-based password recovery flow using SendGrid magic links.
- Guaranteed 100% data integrity in critical image management workflows through transactional database operations.

Bovino IO – University Capstone Project | Backend Engineer

September 2025 – December 2025

- Architected a scalable backend with NestJS and TypeScript capable of processing high-concurrency, real-time telemetry from IoT sensors.
- Built an end-to-end BLE (Bluetooth Low Energy) data pipeline, integrating ESP32 and Raspberry Pi microcontrollers for edge computing and real-time health monitoring.
- Designed and managed a PostgreSQL database with Redis-backed caching and processing queues to handle peak data loads at scale.
- Containerized services with Docker and deployed on AWS, ensuring high availability for a mission-critical early-warning alert system.
- Achieved a Time-to-First-Byte (TTFB) under 50ms, enabling near real-time health alerts for livestock monitoring.
- Delivered a fully functional MVP with a validated business model, combining operational value for commercial ranches with data value for scientific research.

EduPay – University Project | Backend Engineer

September 2024 – December 2024

- Engineered the backend for EduPay, a full-featured payment management platform, from architecture through deployment.
- Built a secure, JWT-based authentication system to manage user sessions and protect access across the platform.
- Integrated Stripe to support both recurring subscriptions and one-time payments, including full webhook handling for real-time payment confirmation.
- Designed the relational database schema and RESTful API architecture powering all core payment and user-management flows.
- Collaborated closely with a frontend team in an agile, Git-based workflow to ship features on schedule.

TECHNICAL SKILLS

Frontend: React, Next.js, MUI (Material UI), TypeScript, TailwindCSS, SSR
Backend: Node.js, NestJS, Express, BullMQ, Redis, TypeORM, Prisma, REST, GraphQL, Cron Jobs
Payments: Stripe (recurring & one-time payments, webhooks)
IoT & Real-Time Systems: MQTT, BLE (Bluetooth Low Energy), ESP32, Raspberry Pi, Edge Computing
Mobile: React Native
Cloud & DevOps: AWS (Cognito, EC2), Docker, Cloudflare, GitHub Actions, Git
Databases: PostgreSQL, SQL Server
Languages: English (Conversational – B1/B2), Spanish (Native)

EDUCATION

Universidad Tecnológica Metropolitana | Ingeniería de Software Multiplataforma 2022 – 2026
